AHT saves physicians time & money with cloud-based frevvo forms and workflows on Android tablets

AHT serves medical practices across a variety of locations. They realized that getting physician signatures on paper forms is wasteful and expensive.

With frevvo Live Forms, the approval workflows are now online. AHT has rolled out a cloud-based solution on Android tablets to their customers.

Now, nurses & patients fill out and sign forms on the tablet, physicians can approve and sign them electronically.

Customer Profile: American Healthcare Technologies (AHT) provides technology services to a range of hospitals and medical practices.

Business Situation: AHT has a number of forms to be filled in by patients, nurses & doctors including enrollment, medical test, consent and prescription forms as well as various questionnaires and surveys. In many cases, forms need to be filled in by a patient or nurse and then sent to a physician for his/her signature and approval and finally to the billing department. AHT customers are distributed across many locations making the existing paper-based system grossly inefficient and expensive.

Solution Summary: Using frevvo Live Forms, AHT has consolidated their forms into a single cloud-based system and rolled out an Android tablet-based solution to their customers. Nurses use tablets to fill in the required fields, and then have physicians sign the forms for authorization.

Benefits:
- frevvo works on mobile devices – signing and approving on a touch-screen Android tablet is quick and easy and saves physicians invaluable time.
- Extensive use of frevvo's built-in validation and business rules has dramatically reduced issues and the need for corrections.
- Once the forms/flows are completed, the submitted data (including signed PDFs) are saved to an external system using a web service.
- Cloud-based frevvo software requires zero installation or maintenance.
- frevvo includes a built-in portal and a user-friendly interface enabling AHS to provide non-technical customers with a simple and intuitive experience.

> *"frevvo's cloud-based software, with its ease of use yet powerful integration, gave us the ability to automatically work on all devices quickly, which was critical for us.*
>
> *We were able to deploy a very complex solution in under 3 months."*
