**TOP BENEFITS**

- Focus on ease of use: Create and deploy rich, dynamic e-forms and manage their approval workflows.
- Minimal training required – non-programmers are creating forms and workflows today.
- Works in your existing web browser. Zero installation.
- On-demand (SaaS) or On-premise delivery options.
- Built-in business capabilities including sophisticated layouts, automatic validation, and business rules.
- Works with your data – full XML support for easy integration with SQL databases, document management systems such as ImageSilo® / PaperVision Enterprise®, SharePoint, and other line-of-business systems.
- Digital signatures and workflow ensure data security, integrity and confidentiality.

**An intelligent document processing solution that's easy to create, and easy to manage**

Forms remain a pervasive aspect of day-to-day business – from short-lived, ad-hoc applications such as event registrations and surveys to vacation request and expense report workflows to data capture interfaces for content management systems to long-lived, mission-critical business processes such as order management. End users most often interact with an organization's processes through forms.

As organizations increasingly rely on the Web as the primary means of interaction with customers, they are emphasizing the capture and management of information electronically. Easy-to-use, business capable e-forms and workflows are a critical aspect of this interaction.

These e-forms based applications need to conform to existing familiar screens and fit into their existing look and feel. Users have come to expect speed, performance and rich behavior on the Web normally associated only with desktop applications.

At the same time, e-forms must work with SQL databases, existing applications such as Microsoft SharePoint, document management systems such as ImageSilo® / PaperVision Enterprise®, application servers, BPM systems, portals and other line-of-business systems.

frevvo Live Forms™ provides an easy-to-use, 100% browser-based designer with capabilities suitable for real business forms including complex validation, business rules, sophisticated layouts and dynamic forms that can automatically be synchronized with data. Using Live Forms™, anyone can create an intelligent solution that provides a rich experience online while maintaining existing business requirements

Best of all, Live Forms™ uses your existing web browser and requires no programming to create and deploy powerful, real-world forms and workflow solutions.

## PLATFORMS, STANDARDS AND SECURITY

### Live Forms Designer

- Firefox 3.0 or higher on Windows, Mac OS, and Linux or Internet Explorer 7 or higher on Windows.
- Browser must have JavaScript, CSS and cookies enabled.

### Using Forms

- Firefox 3.0 or higher on Windows, Mac OS, and Linux; Internet Explorer 6 or higher on Windows; Safari 3.0 or higher on Windows or Mac OS, Google Chrome 9.0 or higher on Windows or Mac OS.
- Browser must have JavaScript, CSS and cookies enabled.

### Live Forms Server

- Java 5 (JRE 5.0) or higher is required. Java 6 is strongly recommended.
- A Servlet2.4 or higher container such as Tomcat 6 or higher is required.
- A JDBC-compliant database such as Microsoft SQL Server, MySQL, Oracle or IBM DB2 is required for production use.

### Security

- View/submit forms over a secure, 128-bit encrypted connection.
- Digital signatures ensure data integrity and confidentiality.
- Plug into existing security infrastructure.

## FEATURES & CAPABILITIES

### Easy to Use

Business users at many customers are using Live Forms today to create and deploy e-forms.

- Graphical, 100% browser-based designer.
- Quickly create forms using an intuitive, drag-and drop interface.
- Use your existing web browser. There's nothing to install and no proprietary "filler" applications.
- Wide variety of pre-packaged controls to collect information such as Date, Money, Phone and Email.

### Built-in Business Capabilities

Live Forms enables customers to create forms that satisfy real-world business requirements:

- Group and arrange controls in a variety of ways – collapsible sections, tabs, multiple columns.
- Provide dynamic behavior via business rules – conditional sections that display when required, or computed values like invoice totals.
- Easily handle repeating items such as multiple addresses.
- Create re-usable control blocks (e.g. Address) for efficiency.
- Allow users to upload and submit attachments with a form.
- Worldwide language support including RTL languages (e.g. Arabic).
- Pre-fill sections of forms based on prior submitted data.
- CSS standards to create a custom look and feel.

### Approve, Review and Track e-forms and workflows

- Automatically route, track and manage approvals processes.
- Digital signatures ensure data integrity.
- Task lists with built-in E-mail notification ensure timely completion.
- Built-in audit trail for tracking submissions.
- Multi-level security to control access to forms and submissions.

### Manage your data

- Connect to your database: forms can get initial data as well as update the database.
- Easily integrate with line of business systems / databases.
- Full XML support simplifies integration with back-end systems.
- Built-in submissions repository can use any database.
- Built-in wizards for ImageSilo® / PaperVision Enterprise®.
- Email integration: Send form data to yourself and auto-respond with a confirmation.

### Security

- View/submit forms over a secure 128-bit encrypted connection.

### Customization/OEM

- Customize the look and feel of forms with easy to use themes.
- 100% embeddable: Live Forms is OEM-ready, easy to brand and embed in your product.
