frevvo

100% Visual Dynamic Web Forms

Overview

Online forms are a big part of customer interactions. Unnecessary data entry, manual calculations, printing for signatures, or even just bad-looking web forms can be a user experience killer.

Generic software doesn't meet your exact business needs and custom programming is expensive.

frevvo offers an alternative. Using our simple, 100% visual software, organizations can quickly design sophisticated, interactive e-forms that work across all devices without coding.
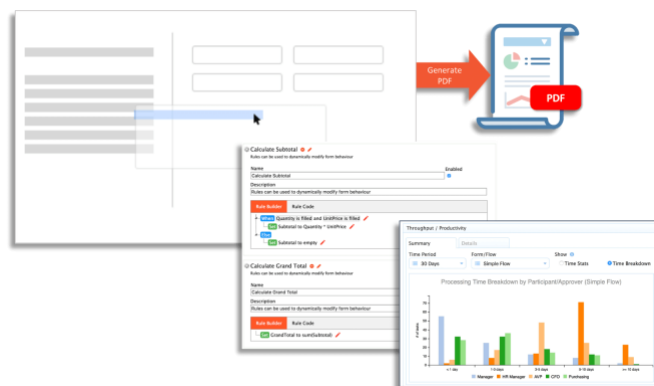

Key Features & Benefits

- SIMPLE FORM DESIGN – DRAG & DROP: Non-technical users can easily design, customize & deploy professional forms with real business features without coding skills or I.T. help.

- BUILT-IN MOBILE: Your business runs everywhere. Your forms need to do the same. frevvo forms and workflows operate wherever your users need them. Best of all, you design forms, setup workflow and create business rules once – we'll ensure that they automatically work everywhere.

- NO PRINTING – ELECTRONIC SIGNATURES: There's no need to print, sign and scan paper documents for approvals. Secure, digital signatures mean users can instantly sign using their touch screen or laptop at any time.

- DYNAMIC FORMS: Business forms are much easier to complete if calculations are performed automatically, irrelevant sections are hidden and fields are pre-populated where possible. With frevvo's Visual Rule Builder, dynamic forms are a piece of cake.

- WORK WITH BUSINESS DATA – INTEGRATION: Forms & workflows are much more useful if they can display things like part numbers and employee details. frevvo forms easily integrate with SQL Databases, Active Directory (LDAP) and business systems to provide this dynamic functionality.

- CUSTOM PDF GENERATION: Easily generate custom PDF documents from form data such as a Government W-4 or I-9. Signatures can also be included so the form/workflow instantly generates a valid PDF document.

- ENTERPRISE FEATURES: Attachments, Accessibility, Multiple Languages, Sophisticated Layouts, Repeating Items, Custom Styles, Access Control, Location Services, XML/XSD integration: frevvo has all the features to fulfill enterprise needs.

- BUILT-IN WORKFLOW: Extract much more value from your forms by making them actionable. When you make them part of a frevvo workflow, you'll connect your people, data and business systems and turn your inefficient, manual processes into powerful, streamlined workflows.
