Using Frevvo's Cloud For Secure Approval Workflows

Contents

03 What are Approval Workflows?
09 Public or Private Cloud?
16 Is Frevvo's Cloud Secure?
20 Will it Save Me Money?
27 What More Should I know?
30 How do I get Started?

Part 1

Every business relies on
Approval Workflows
like Purchase Requisitions, Sales Orders, Leave Approvals, Expense Reports and Employee On-boarding to conduct routine, day-to-day activities.

Approval Workflows Are Forms Filled In By Employees, Customers & Partners That are **Routed Through The Organization For Comments & Signatures**.

The Routing is usually not Too Complicated.

View Examples

Approvals are **the Lifeblood of your business**. Yet:

- They're Word/Excel/PDF files E-mailed as Attachments.
- They Crowd already overflowing inboxes.
- Managers forget and Employees Waste time chasing down approvals.
- If a signature is required, it means Print, Sign and Scan.
- They're practically impossible to use on Mobile.

It's 2017 !!!

We don't print Driving Directions or Boarding Passes Anymore. Mortgage Documents can be Signed Electronically. Cloud is here. Everyone has a Smart Phone. Green is on everyone's mind.

Why are YOU still printing and emailing documents for approvals & signatures?

Digitize in the Cloud

Automate your Approval Workflows using Frevvo's Secure, Cloud-based, Mobile-ready products and stop worrying about the routine stuff.

you'll save Time & Money and Increase your **Focus on Customers**.

Part 2

Public Cloud refers to resources (Storage, Hardware & Applications) deployed by a Service Provider, delivered over the Internet under the control of the service provider. You SHARE RESOURCES WITH OTHER CUSTOMERS.

Private Cloud refers to a Cloud Computing platform and/or Applications deployed behind the corporate firewall under I.T. control. You **DO NOT SHARE RESOURCES** with anyone else.

Public or Private Cloud?

Public Cloud

Likely to be **Less Expensive and More Resilient**.

Turn resources on/Off anytime and Try New Things quickly.

Pay only for what you use.

Nowadays, Public Clouds are **often More Secure** than traditional corporate data centers.

Why Private Cloud?

Regulatory Requirements such as HIPAA and the resulting potential liabilities.

Integration with existing business systems behind the firewall e.g. Leave Approval talking to an HR system.

Single Sign On and/or Custom **Authentication** Protocols.

Frevvo has Both

Simply sign Up Online and use our Secure Public Cloud.

Download, Install behind your firewall and create your own Secure Private Cloud.

Either way, you'll see many benefits like self-Service and Multi-tenancy.

Part 3

This Myth Won't Die !!

This is primarily a ***Perception*** issue.

Most Security Breaches including some recent high profile ones have taken place in Traditional corporate data centers.

companies naturally put far more focus on Customers than on data center security.

[See More Cloud Myths ...]

Multi-Layered Approach

- Secure data centers – certifications include SOC 1/SSAE 16/ISAE 3402 (formerly SAS 70), SOC 2, SOC 3, FISMA, DIACAP, FedRAMP, DOD CSM Levels 1-5, PCI DSS Level 1, ISO 27001, ITAR, FIPS 140-2, and MTCS Level 3.
- Secure storage – everything encrypted at rest.
- Secure data transfers – encrypted in transit.
- Secure network – no direct access to servers.
- Secure backups – everything encrypted.
- Security Policies – principle of least privilege, daily security patches, security audits.

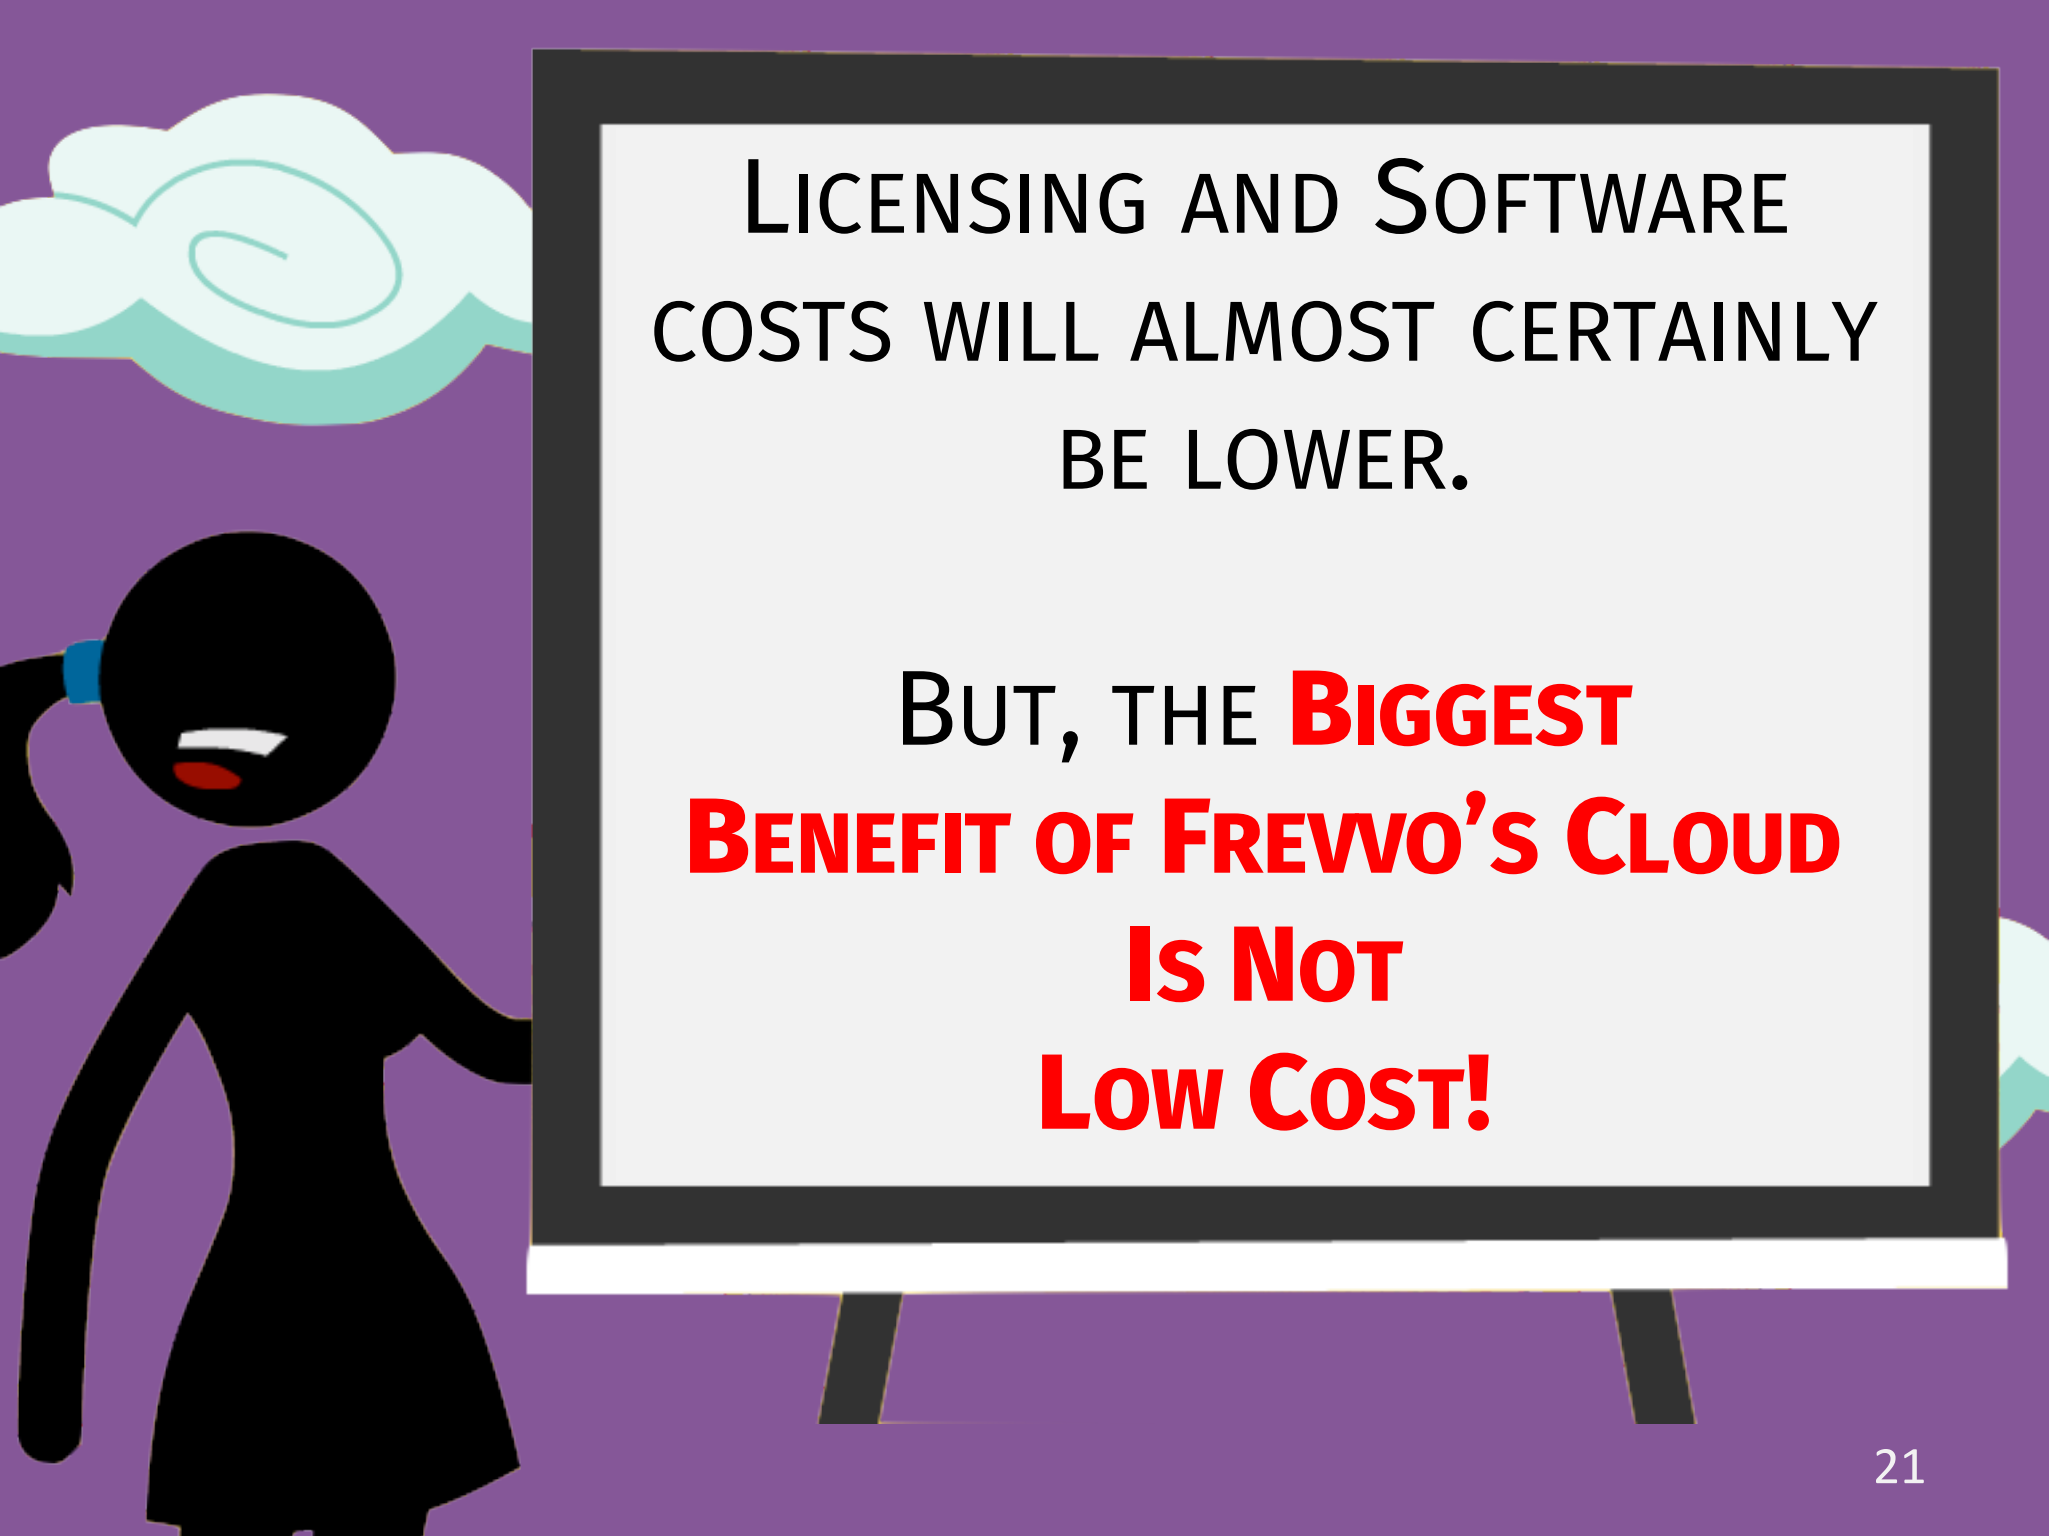
Focus on Security

We know your data is important to you.

Security is absolutely critical to our success.

Our cloud environments must be secure. We take this stuff seriously, monitor continuously, and constantly improve our processes.

Will it Save me Money?
Part 4



Licensing and Software costs will almost certainly be lower.
But, the Biggest Benefit of Frevvo's Cloud Is Not Low Cost!

Try New Things Easily

Add/Remove resources anytime without incurring Big Capital Costs.

Want to try a new automated workflow? Build & Deploy in days, experiment and if it doesn't work, shut it down and try something else.

At frevvo, there are **no Long-Term Contracts**.

Anytime, Anywhere, Any Device

Business today is **GLOBAL**.

Everyone has a **SMART PHONE**.

Frevvo's Cloud-based Automated Approval Workflows Let You act at the **SPEED OF TODAY!**

Business Resiliency

Frevvo's Cloud now provides Unlimited, Affordable Storage and Access from Anywhere with Redundancy and Disaster recovery that's hard for most businesses to match.

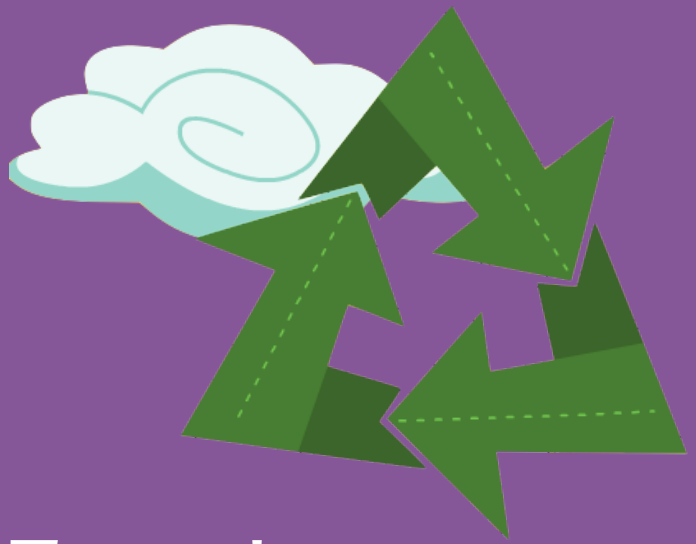
Use it and Stop worrying about Fires & Floods **Focus on Customers**.

Business Intelligence

Frevvo's digital processes can integrate with your other business systems and services.

Integration can extract essential information and dramatically improve business intelligence and **give you insights on how better to operate.**

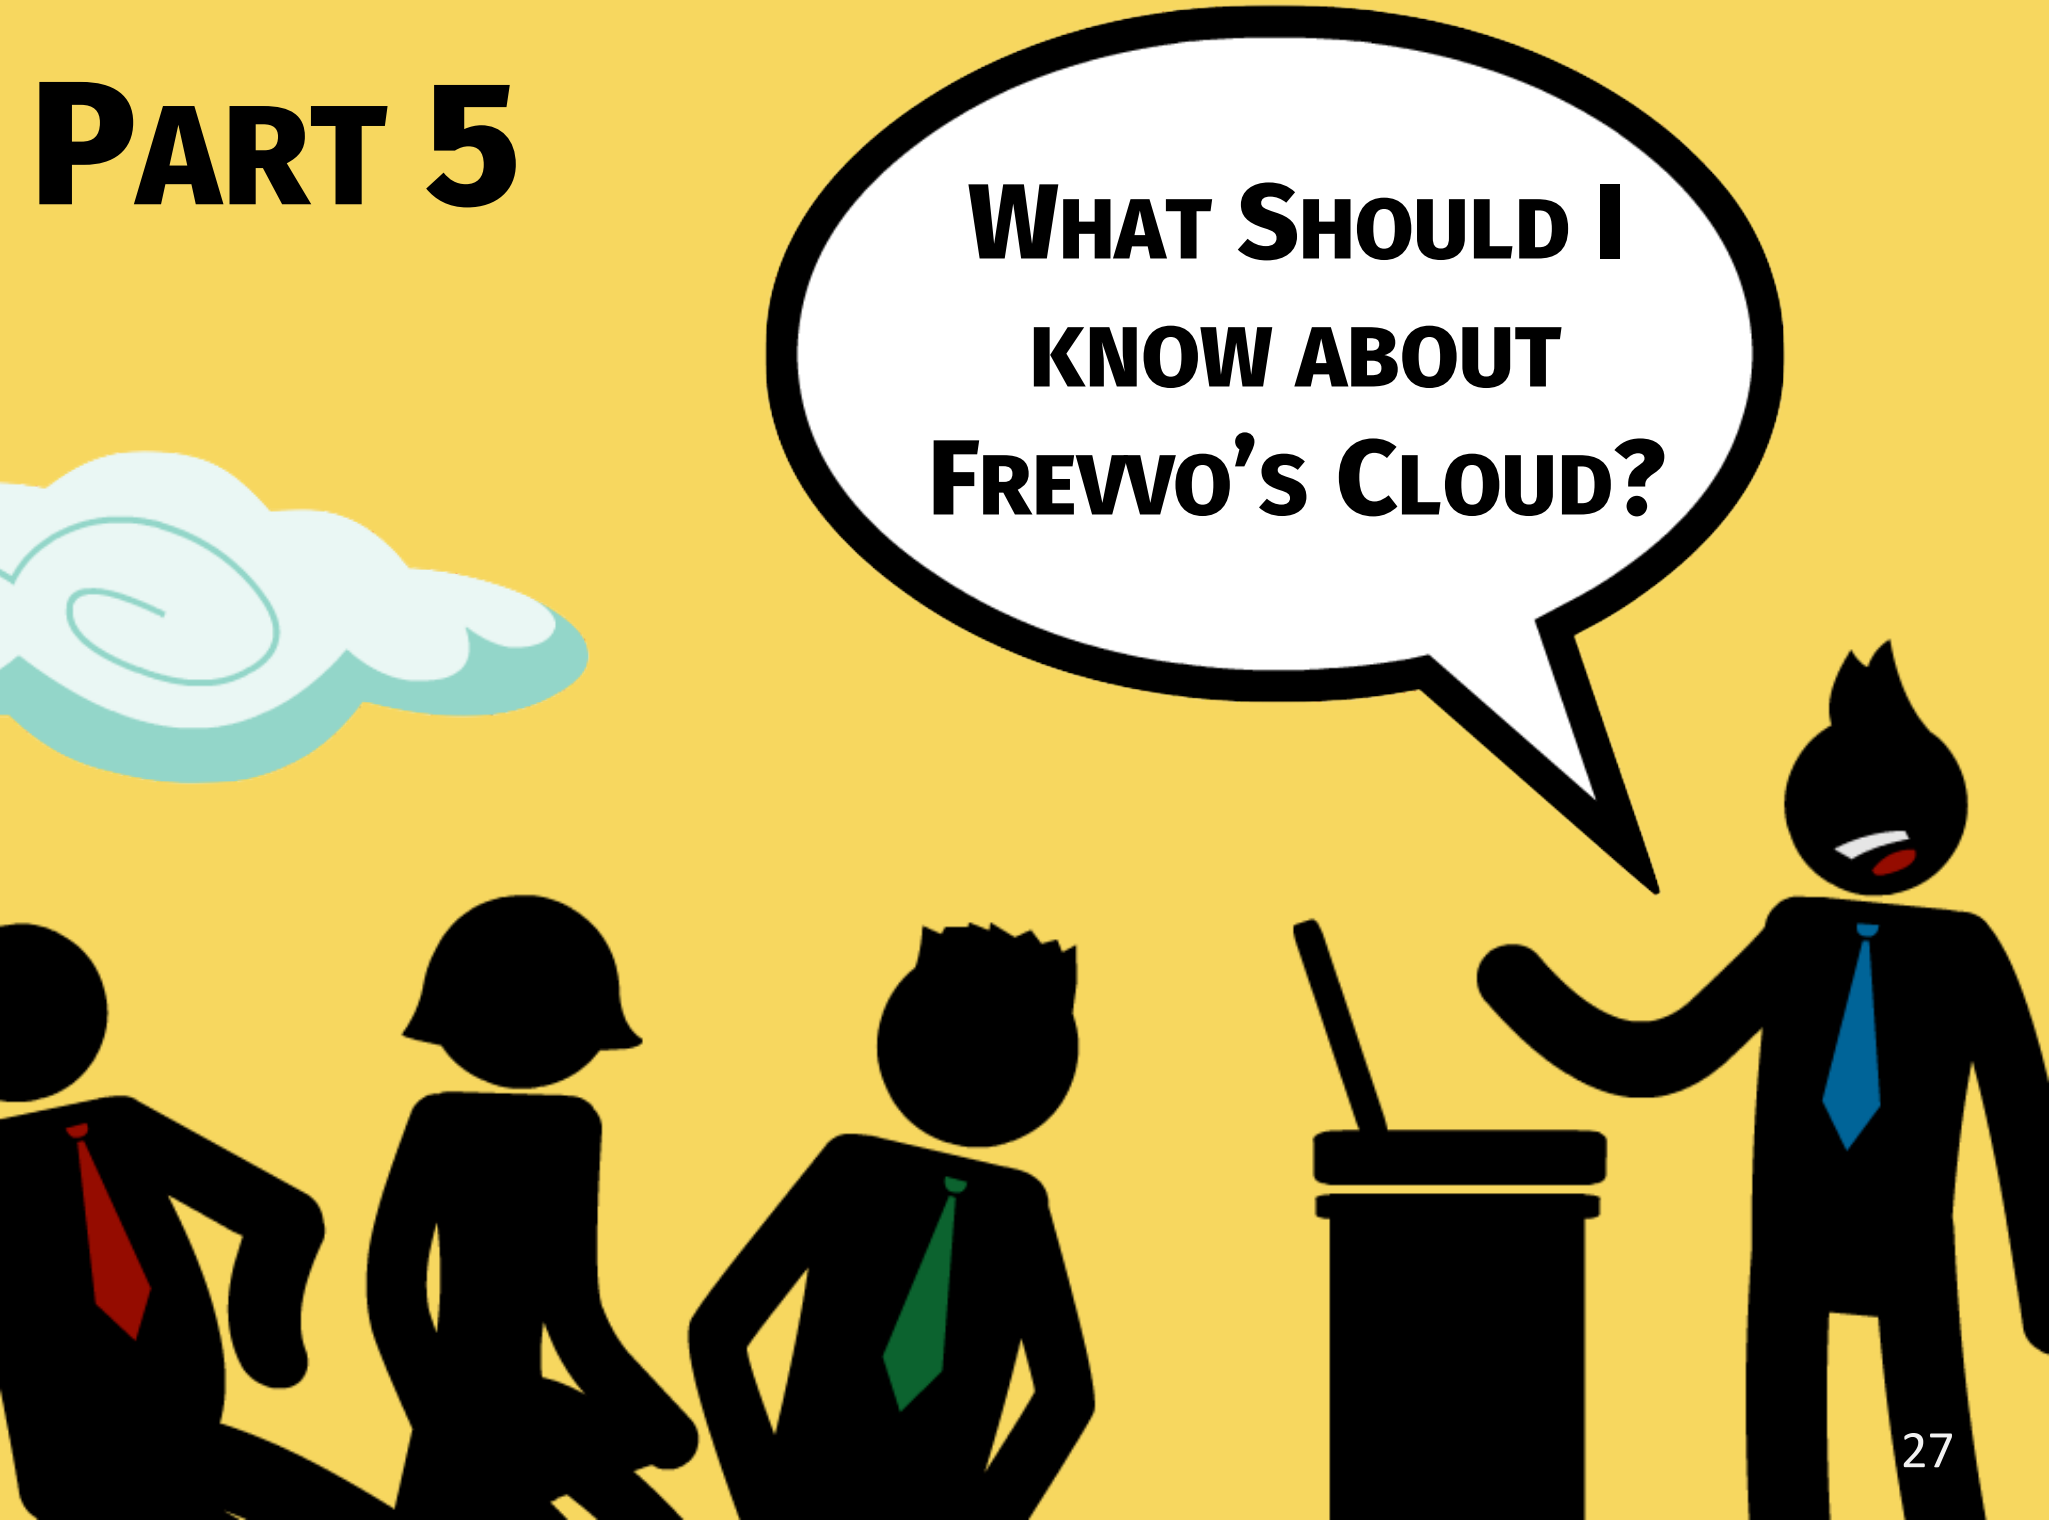
More than Just Money



Save Paper,
Help the Environment,
Go Green!

There's a lot more value to Frevvo's Cloud than license costs, which are themselves lower. You can start implementing **game-changing solutions today**.

Part 5



• Frevvo's Cloud is Secure.
• It's Affordable.
• No Long-Term Contracts.
• Public or Private.
• Anytime, Anywhere, Any Device.
• LDAP/AD Integration. SAML.
• Works with your database.

Myth: We Must Have One Cloud Vendor?

Cloud is not one thing. Business goals come in all shapes and sizes. Aligning them with the benefits of a particular cloud solution should be the deciding factor rather than any attempt to standardize on a single vendor's offerings.
